STUDY ON DIETARY HABITS

In partnership with the Social and Economic Council of Ottawa-Carleton (CESOC), Réseau de Soutien à l’Immigration Francophone de l’Est de l’Ontario (RSIFEO), the African Diaspora Association of Canada (ADAC), and the Lowertown Community Resource Centre, a research team from the University of Ottawa is looking for black women originating from sub-Saharan Africa or the Caribbean, who have a child aged between 6 and 12 years (regardless of the place of birth of the child) and Francophone women born in Canada who have a child aged between 6 and 12 years interested in participating in a study to evaluate the effect of immigration and language on dietary habits and weight of school-aged children.

You and your child may be eligible to participate in the project in which you will have a meeting with your child and a dietitian for about 90 minutes (no blood sample). You will receive a personalized diet assessment summary of your child as well as a compensation of 25$ for your participation (grocery gift card).

The meeting is scheduled according to your preference and availability: at home or on campus, evening or daytime, week or weekend day, we are flexible.

Eligibility criteria:

- Being a black woman born in sub-Saharan Africa or Caribbean
- OR
- Being a francophone woman born in Canada (regardless of ethnicity);
- Having a child aged 6 to 12 years (regardless of place of birth);
- Living in the Ottawa area (Ontario side);
- Understanding French or English enough to hold a conversation;
