Conférence sur la santé maternelle et infantile dans la Communauté / Strengthening maternal-child health in our community: A Research Think Tank
November 30th, 2015

Identified Top Priorities during group discussions

1. To create an inclusive model using an interdisciplinary approach to improve sexual and reproductive health over the lifespan
2. Conceptualization of health and wellness from multicultural perspective
3. Safe breastfeeding for HIV positive women
4. Co-creating knowledge and knowledge mobilization in reproductive maternal and child health
5. To create a provincial and territorial database that looks like BORN
6. Create a robust and comprehensive research and policy development
7. To have more research towards developing policies that are family centred and inclusive
8. Need more intervention that addresses inequities and that will improve not only health outcomes but social ones as well
9. Identify (develop intentions / strengthen systems) gaps in services/care provided to families postnatal to twelve months
10. Identifying reasons for formula supplementation in hospitals and how to protect their identity
11. System interventions for promoting healthy and emotional supports starting prenatally
12. Develop innovative approaches across sectors to address breastfeeding
13. Modernization of health promo messages related to perinatal health using technologies
14. To assess and explore the perinatal/breastfeeding needs of the Syrian refugees that will be arriving
15. Exploring migration as a phenomenon into and within Canada - intergenerational experiences and integrated data sets
16. Exploring structural factors that impact equity & drive inequities
