From the Vice-Dean’s Corner:

Here is an update on progress with developing our new research strategic plan. We recently completed a consultation exercise with School Directors, the Research Committee, and Research Platform Representatives. The following recurrent themes have emerged. Essential criteria for selecting strategic priorities should include distinctive or “signature” areas of research intensity, opportunities for supporting HQP (research trainees at undergraduate, graduate and postdoctoral levels), an emphasis on applied and translational research, alignment with the priorities of federal (e.g. Tri-Council) and provincial funding agencies, international impact through collaborations and partnerships, and effective promotion and marketing for public recognition and graduate student recruitment. Components from our current, 2014-2018, plan that should be sustained include strategic tenure track hires targeting research excellence and leading/emerging scientific directions, creation of a dedicated Faculty resource for supporting student scholarships and other awards and marketing to prospective students, bottom-up approach to developing our shared research platforms, and increasing the efficiency of financial management of research funding. New priorities should include facilitating inter- and trans-disciplinary research, enhancing knowledge translation and mobilization, and improved communication about Faculty achievements and opportunities for research collaborations across Schools and Faculties.

A next step will be to examine how this information fits with the new Strategic Areas for Development that are being developed for the University, under the leadership of the VP Research. Best wishes, Jeff
